AARYAN BASNET

Full-Stack Developer

basnetaryan1011@gmail.com | Bhaktapur, Nepal | github.com/AaryanBasnet | linkedin.com/in/aaryan-basnet | aaryanbasnet.com.np

SUMMARY

Full-Stack Developer with hands-on experience building React, Node.js, and Express applications with REST APIs, authentication, payments, real-time communication, and automated testing. Experienced with MongoDB, PostgreSQL, Flutter, and application security including JWT, RBAC, TOTP MFA, secure cookies, and rate limiting.

EDUCATION

BSc (Hons) Computing — First Class Honours
Softwarica College of IT & E-Commerce, affiliated with Coventry University 2023 – 2026

Thesis: Bilingual English/Nepali virtual assistant for Tribhuvan International Airport using LangGraph ReAct agents and ChromaDB-based RAG.

Certifications: Learn JavaScript, Boot.dev (2026) | Intro to AWS IAM, AWS Training (2025)

PROJECTS

Venure — *Banquet & Wedding Venue Booking Platform (Web + Mobile)* 2025 – 2026

- Built a full-stack venue booking platform supporting customers, venue owners, and administrators across React and Flutter applications.
- Developed backend APIs for venue listings, availability, bookings, favorites, reviews, notifications, and role-based access control.
- Implemented real-time customer–venue-owner chat using Socket.IO and integrated Stripe payments with biometric confirmation in mobile checkout.
- Built venue-owner and admin workflows for venue management, image uploads, and venue approval using Cloudinary.
- Added Playwright end-to-end tests covering authentication, favorites, booking/payment flows, venue management, image uploads, and admin approval.

TECH STACK: React.js, Node.js, Express.js, MongoDB, Flutter, Hive, Socket.io, Stripe, Playwright, Cloudinary

CrownHour — *Secure Luxury E-Commerce Platform* 2025

- Built a full-stack e-commerce platform with product browsing, carts, wishlists, order tracking, inventory management, and an admin dashboard.
- Implemented JWT authentication using HTTP-only cookies and session versioning to invalidate active sessions after logout or password changes.
- Added TOTP-based MFA with backup codes and RBAC for protected account and administrative operations.
- Implemented audit logging for administrative actions, authentication events, and failed login attempts.
- Hardened API endpoints with Helmet security headers, rate limiting, and Zod request validation.

TECH STACK: React.js, Node.js, Express.js, MongoDB, Stripe, JWT, Passport.js, Cloudinary, Helmet, Zod

SweetNest — *Bakery & Custom Cake Platform* 2025 – 2026

- Built a full-stack custom-cake platform with a live 3D designer (React Three Fiber), eSewa checkout, order tracking, loyalty points, and an admin dashboard.
- Fixed a checkout race found in load testing (10 coupon orders created 8; an atomic cart lock now allows 1) and made eSewa callbacks idempotent.
- Cut median latency of cake-list endpoints 44–52% (191 to 107 ms) under load with lean Mongoose queries.
- Wrote 280+ backend, 100+ frontend, and Playwright end-to-end tests, run in GitHub Actions CI.

TECH STACK: React.js, Three.js, Zustand, TanStack Query, Node.js, Express.js, MongoDB, eSewa, Jest, Playwright

SKILLS

Languages: JavaScript, HTML, CSS, SQL
Frameworks & Libraries: React.js, Three.js, Node.js, Express.js, Flutter, BLoC, Tailwind CSS
Data & State: MongoDB, PostgreSQL, Mongoose, Zustand, TanStack Query
Backend & APIs: REST APIs, WebSockets, Socket.IO
Tools & Services: Git, GitHub, GitHub Actions, Docker, Playwright, Jest, Stripe, eSewa, Cloudinary
